In the meeting, we talked about something about GUI and Backend side.

Last week, we did some research on different features and created simple GUI.

We decide to switch from swing to javaFX. Stef will make the digital design of the GUI. Anxian and Silviu will do some research on JavaFX and create the login and registration page. For the Database, Nafie will create a second version of the schema the database. Backend team will do some research on springboot and add user authentication to server. We also discuss something about merge in the Gitlab .
